

AIR RECEIVER / DRYER

All-in-One Portable Package	<p>The air dryer first cools hot and wet air discharged from the compressor. Cooling forces a substantial quantity of entrained moisture to condense.</p> <p>Even after exiting the after-cooler, the air is saturated with vapor (100% relative humidity). The compressed air then passes through the drying vessel, which contains specially formulated desiccant called Dry-0-lite. The desiccant cuts the humidity of the air roughly in half. Air finally flows through an after-filter to trap any fine particles in the airflow.</p> <p>Completely portable. Easy to operate</p>
